Certolux offers specification grade luminaires for local and international customers. Backed by many years of design and manufacturing experience, Certolux represents an excellent source of luminaires, in a market that has a limited number of options.

The name CERTOLUX comes from a combination of CERTO: the Italian noun for Certainty or Sureness of Quality, and LUX: Latin for Light and the SI derived unit of illuminance.

Now the name Certolux has become synonymous with innovative designs and quality of manufacturing.

Certolux successfully utilizes cutting edge software and manufacturing equipment combined with years of experience to continually expand product offerings, and manufacture the best solutions to meet the specific needs of our customers.

Certolux's mission is to provide high quality luminaires for specialty environments at fair market value, using modern methods of design, engineering and manufacturing technology that will meet or exceed our customer's expectations.

Certolux Specialty Luminaires is a wholly owned division of Visioneering Corp based in Toronto. The company was originally founded as a fluorescent lighting manufacturer in 1952 by Daniel Wiener.

Over the years Visioneering has manufactured a diverse range of products including electronic & hi-fi components, solid state ballasts and photoelectric controls.

Although Visioneering has enjoyed great success in other fields, the company has never lost sight of its roots in lighting and is now Canada's largest independent lighting manufacturer.

Visioneering manufactures a wide range of lighting and non-lighting products for customers around the world in our modern 210,000 square foot plant and head office in Toronto.

Certolux is a key division of Visioneering, and has already made a significant impact in the specialty lighting market. We are continuing to expand our product line in response to customer demands. Certolux doesn't just sell lighting products. We can provide engineering and design assistance throughout every stage of your project.

Visioneering employs approximately 200 people and values the long-term relationships that have been developed with our employees over the years.

Check our website, or contact us for more information on how Certolux can help you with all your lighting needs.
